Retrospection

Ambulance Module:

- **What went well.**

  User Stories:

  - I as an admin should be able to add ambulance so that I can add the new ambulance.
  - I as an admin should be able to delete the ambulance so that I can remove the unwanted ambulance.
  - I as an admin should be able to view ambulance so that I can see the stored ambulance details.

  Summary:
  - I was clear about the wireframe and the tasks that comes under this user story, based on that I estimated the time for each task.
  - As per the estimated time for the task I was able to do things in time.

- **What did not go well**

  User Stories:
  - I as an admin should be able to view ambulance list so that I can see the available ambulance.
  - I as an admin should be able to update the ambulance details so that I can update the previously stored ambulance details.

  Summary:
  - On the intermediate demo our customer asked me to change the UI design of displaying the list of ambulances, it killed some time of the next tasks.

- **What should have been done**
  - It could have been good if I have planned some backup time earlier, for the changes after the intermediate demo.
